
Vega Science Trust\'s Educational Resources

Posted by Gill Watson - 2009/04/24 10:31

Hello! I wondered if anyone could suggest the best places to advertise without payment (as we are a small not-for-profit org) the Vega Science Trust's science video resources <http://www.vega.org.uk>

In particular a set of science career programmes - see <http://vega.org.uk/video/series/10>

A set of science mini-films explaining buckyballs are, how to make a battery, wind power from a windmill, generate electricity, nanotubes etc - see <http://vega.org.uk/video/subseries/27>

and a set of programmes aimed at assisting primary school teachers to explain solids, liquids and gases - see <http://vega.org.uk/video/subseries/30>

In addition there are plenty of other resources on the website aimed at different age groups from interviews with famous scientists, Feynman lectures to discussions on nanotechnology and stem cell research to endless energy.

Links help us to try and gain funding to make more programmes.

Thanks for any advice:)

Vega science has many part one of it is the space. Radioastronomical observations of our galaxy have revealed hordes of molecules in the interstellar medium. Extremely fast reactions result in the high abundance of complex organic compounds in the space between the stars.

Affordable Biological microscopes in Toronto, Biological microscopes in Toronto, Industrial microscopes in Toronto.
